CHAPTER 13
PERFORMANCE COMPLIANCE METHODS

SECTION 1301.2.3
IEBC Interpretation No. 43-06
2006 Edition
Issued: 11-07-2006

1301.2.3 Additions. Additions to existing buildings shall comply with the requirements of the \textit{International Building Code}, \textit{International Residential Code}, and this code for new construction. The combined height and area of the existing building and the new addition shall not exceed the height and area allowed by Chapter 5 of the \textit{International Building Code}. Where a fire wall that complies with Section 705 of the \textit{International Building Code} is provided between the addition and the existing building, the addition shall be considered a separate building.

Q: Is an addition to an existing building subject to the requirements of the \textit{International Building Code} for new construction if the existing building including the new addition complies with the mandatory safety scores required in Section 1301 of the \textit{International Existing Building Code}?

A: Yes. New construction, including additions to existing buildings and/or alterations to existing buildings, must comply with the provisions of the \textit{International Building Code}. In addition to the \textit{International Building Code}, new construction is also subject the provisions of all International Codes to the extent mandated by the authority having jurisdiction, such as the \textit{International Fire Code}, \textit{International Plumbing Code}, \textit{International Mechanical Code}, \textit{International Fuel Gas Code}, \textit{International Energy Conservation Code}, etc.
